

GRANDFATHERING MOTIONS

Jeremy Susac:

1. Motion to allow grandfathering of NEM customers under NEM 1 retail rates at the size of the solar system outlined in the approved NEM application with a cutoff date of 12/31/15 or 235MW – whichever is greater – for 20 continuous years and running with the home.

Marco Velotta:

Please find attached a motion for consideration by the Technical Advisory Committee with respect to “grandfathering” prior net-metering customers. Please let me know if there are any questions on this, but I believe it captures my comments on the existing rate, the cutoff, transferability, and maintenance/upgrade. As I mentioned, as I am unsure of my schedule for the next meeting, please let me know if a call in number is available should I not be able to attend in person. Thanks,

MOTION:

To recommend that the New Energy Industry Task Force put forth a Bill Draft Request for the 2017 Regular Session of the Nevada Legislature that considers, but is not limited to, the issue of grandfathering existing net-metering customers onto a rate structure effective for a period of 20 years dated from the effective date established by law, as follows:

- All net-metering customer-generators with a system installed prior to December 31, 2015 OR with a system that was installed or was proposed to be installed under the cap of 235 megawatts established by SB 374 (2015) shall be eligible to be included in a transitional net-metering rate:
 - The rate shall have monthly basic service charges, volumetric, and excess energy credits fixed at the same retail rates as non-generating residential and small commercial customers, which may be increased or decreased during a utility’s general rate case
 - The rate shall offer optional time of use and time of production options, for which a customer-generator may elect to participate
 - The rate shall remain with the property at which the system was installed;
 - EXCEPTION: A customer-generator that elects to move a system that qualifies under this rate to a new property within the utility service territory shall be offered the same rate, provided that the customer-generator complete the reinstallation of the system within 90 days of establishing service at the new property and cease at the original.
 - Any customer-generator that qualifies under this rate shall be allowed to replace, maintain, and repair their system, even if replacement slightly increases the system output due to efficiency increase or technological change, provided that the increase in

an individual system's capacity is increased by no greater than 10 percent of the system's capacity at the time the customer completed the original net-metering agreement or 1 kilowatt (not to exceed a total generation capacity of 1 megawatt), and is sized to meet and not exceed the customer-generator's annual onsite load.
